CLEON
OIL & GAS

Partner with us

Flexible energy. Reliable service.

CLEON Oil & Gas has been running petrol and diesel stations since October 2025, with every litre measured, every site kept safe and every report clear. Our pilot station is live in Kafanchan, Kaduna State.

See how we work

Station dashboard

Illustration with example figures

Sales	Fuel stock	Litres sold	Cash and POS
₦5,104,000	18,500 L	3,520 L	Reconciled

PMS 1	PMS 2	AGO
78% full	54% full	31% full

Stock check — No variance

Fuel, service and stations that run properly

We sell fuel, manage stations for owners, and build useful shops around the forecourt.

Our vision: To set the standard for accurate, safe and transparent fuel retail across Nigeria.

Petrol and diesel retail

Reliable sales of PMS and AGO, with stock and shift controls at every pump.

Margin per litre

Station management

Staffing, daily supervision, sales and stock reporting, and cash and POS reconciliation for station owners.

Management fee and performance bonus

Non-fuel retail

Convenience goods, lubricants, food and drink, vehicle services and partner concessions suited to each site.

Retail margin or concession rent

LPG and CNG

Planned for later, once demand, safety, capital and approvals are confirmed through a separate feasibility study.

Coming after feasibility

Three ways to work with us

We stay flexible about how a station is run, so you can choose the arrangement that fits your property.

Scenario A

Independent lease

We lease an unbranded station and run it under our own brand or as an independent marketer.

- Direct control of sourcing and pricing
- Full forecourt revenue

Scenario B

Marketer partnership

We lease a station and sign a franchise and supply contract with a major marketer.

- Established brand and credit terms
- Guaranteed supply line

Scenario C

Station management

Own a station but don't want to run it? We manage daily operations, stock and staff for you.

- Fixed monthly fee
- Bonus tied to litres sold and shop sales

Every litre accounted for

Our proprietary station management platform puts inventory, sales, deliveries, expenses, payments, reporting and operational controls into one record. Managers see differences the same day and investigate them, instead of relying on memory or notebooks.

Stock review. Compares receipts, pump sales, dips and tank balances.

Price and cost control. Prices by product and date, with FIFO cost of goods sold.

Payment visibility. Cash, POS, deposits and transfers reconciled against activity.

Owner reports. Excel, PDF and CSV exports, ready to share.

We grow one proven station at a time

New sites open only when supply, funding, people and management capacity are ready.

1

Prepare

Choose the corridor and model, screen the site and confirm approvals.

2

Run the pilot

Our Kafanchan pilot has operated since October 2025, reconciling sales, stock and cash daily.

3

Stabilize

Use pilot records to review margins, stock differences, supply and complaints, and fix problems.

4

Expand carefully

Repeat what works. Add sites, and later LPG and CNG, when we are ready.

Where we operate and where we are heading

- **Kafanchan, Kaduna State: pilot station, operating**
- Bauchi
- Gombe
- Jos
- Kaduna
- Katsina
- Kano
- Keffi, Nasarawa
- Abuja

Also under consideration: Zamfara, Jigawa, Kebbi, Benue and Niger, subject to site screening and commercial terms.

Own a station, supply fuel or run a fleet? Let's talk.

Tell us about your site, supply or fleet and we will reply with the best way to work together.
